Digiwhist sustainability - update 2 release notes

Structured data

Majority of time was spent on fixing and improving of process of retrieving structured data from unstructured data and it's correct cleaning for following sources:

- Hungary - http://kozbeszerzes.hu/
  - significant improvements in parsing contract notice publications where availability of basic notice variables increased from 18% to 79%
  - availability of basic bidder information increased from 51% to 60%
  - Final and estimated price information availability increased from 81% to 91% and 62% to 73% respectively
- Romania - http://data.gov.ro/
  - this source was completely revised and the number of publications parsed in now almost 2.8 million compared 200k during last data update
- Slovakia - http://www.uvo.gov.sk
- EU - http://ted.europa.eu
- TED CSV - http://data.europa.eu/

Slovakian and TED data are one of the top quality data sources and the development was focused on specific errors discovered during analytical works to fine tune the outputs.

Opentender

- Calculation of year of the tender during data migration was updated so that it uses more date fields. This change lead to rapid increase of number of tenders displayed in the main visualisation on each national portal e.g. https://opentender.eu/hu/ . It now reflects the reality much more precisely
- Not reflecting an empty values during the filtering when a filter was moved to some value and back to full range of values was fixed.
- Google analytics were incorporated into a portal
- PayPal donate button was added to allow users support the project
